

You've got your sights set on that car. It's the right price, looks good, and it's the perfect size for what you need. But there is one critical factor you may not have thought about: it is important that your vehicle offers you good protection from injury in the event of a crash.

The Used Car Safety Ratings charts on the reverse of this brochure provide you with the crash safety rating for the driver. They show you how well each vehicle protects its driver from death or serious injury in a crash.

It is also important that your vehicle offers good protection to other road users with which it might collide, including pedestrians, cyclists and motorcyclists, or the drivers of other vehicles. For example, the crash statistics analysed by Monash University indicate that many large SUVs are more likely to cause serious injuries to other road users in a crash than most other vehicles. Those vehicles which provide excellent protection from injury for their own drivers as well as for other road users in the crash receive a "Safe Pick" rating. If you are serious about reducing road trauma, you need to consider how your vehicle protects other road users as well as you, the driver.

IF YOU CARE ABOUT THE SAFETY OF BOTH YOURSELF AND OTHERS, CONSIDER CHOOSING ONE OF THE MODELS WITH A "SAFE PICK" LABEL.

This brochure gives safety ratings for 184 vehicle models which cover most of the popular vehicles in the Australian and New Zealand vehicle fleets manufactured from 1996 to 2009.

It's worth taking a few minutes to read this brochure and find out how the vehicle you are considering purchasing compares on the safety front. Those few minutes could save a life – your own, your passenger's or that of another road user.

|                           |   |   |   |                                     |
|---------------------------|---|---|---|-------------------------------------|
| PROTECTING YOU IN A CRASH | HOW THESE SAFETY RATINGS ARE CALCULATED | WON'T CERTAIN KINDS OF VEHICLES SCORE A GOOD RATING BECAUSE OF THE TYPES OF PEOPLE WHO DRIVE THEM OR WHERE THEY ARE DRIVEN? | WHAT'S THE DIFFERENCE BETWEEN THESE RATINGS AND THE NEW CAR SAFETY RATINGS? | FEATURES TO ASSIST AVOIDING A CRASH |
|---------------------------|---|---|---|-------------------------------------|

|   |   |  |  |  |
|---|---|--|--|--|
| <p><b>If all vehicle safety features</b> were equivalent to the safest model, the number of fatal and disabling crash injuries could be significantly reduced.</p> <p>Safety features that may significantly reduce the risk of death or serious injury include:</p> <ul style="list-style-type: none"><li>• crumple zones</li><li>• collapsible steering columns</li><li>• reinforced door frames</li><li>• front, side, curtain and knee airbags</li><li>• seat belts designed to work with airbags.</li></ul> <p>The charts in this brochure show safety ratings for 184 vehicle models.</p> | <p>Records from over 4 million vehicles in police-reported road crashes in Australia and New Zealand between 1996 and 2009 were analysed by Monash University's Accident Research Centre. The ratings were calculated using an internationally reviewed method<sup>1</sup> and are influenced by the vehicle's mass, the structural design of the body, and the presence of safety features in the vehicle, such as airbags and types of seat belts.</p> <p>Each of the driver protection ratings in the 2011 update has been recalculated based on the most recent crash data available so they are not comparable with the ratings published in previous years. Models of vehicles that cause lower injuries to other road users with which they collide including other drivers, pedestrians, cyclists and motorcyclists, as well as providing excellent protection for their own driver, are accorded the "Safe Pick" label.</p> <p>The scores for each individual model can be compared against the ratings for all other vehicles.</p> <p>The driver protection ratings are about the risk of death or serious injury to the driver of the vehicle in the event of a crash. The ratings are not about the risk of being involved in the crash in the first place, which is generally determined by a range of factors including driver behaviour and the crash environment.</p> | <p><b>These factors</b> were taken into account as much as possible when the data were analysed. The ratings were adjusted for factors such as driver gender and age, type of road user involved, speed limit at the crash location, number of vehicles involved, crash configuration, and year and location of crash.</p> <p><b>NEWER VEHICLES ARE SAFER</b></p> <p>An important finding of the Used Car Safety Ratings is that on average newer models provide their drivers with better protection from injury in a crash. These improvements come from better structural designs, as well as an increase in the fitting of safety features such as front, side, curtain and knee airbags, more advanced seat belt systems and vehicle interiors built with plastics instead of steel, so that they provide padding when struck by a human occupant.</p> <p>While average vehicle safety levels have improved over time, there is significant variation even between vehicle models of the same age. Furthermore, some vehicle models, including recent ones, provide good protection for their own drivers but present a relatively high risk of injury to other road users in a crash. The Used Car Safety Ratings assist buyers to select vehicle models that provide the best protection for all road users including themselves.</p> <p>These ratings are based on available data up until 2009. Later crashes have not been included. Occupant protection in smaller vehicles has improved significantly in recent years. Buyers considering a late model vehicle, particularly in the light and small categories, that is not listed in this brochure should check the ANCAP rating and aim at a 5 star performance.</p> | <p><b>The new car safety ratings</b> (eg ANCAP) are determined by crash testing vehicles in a controlled laboratory setting while the used car safety ratings in this brochure are calculated using data from police reports on actual crashes involving a range of drivers and all types of driving conditions.</p> <p>Occupants of heavier vehicles in real-world two-vehicle crashes typically fare better than those in lighter vehicles. This is why ANCAP crash test results should not be compared among vehicles with large weight differences. In many single-vehicle crashes, higher weight offers no safety advantage. ANCAP crash test ratings relate to both occupant protection and the ability of the car to avoid a crash. ANCAP has a separate rating for a vehicle's ability to protect a pedestrian in a crash.</p> <p>The used car safety ratings listed in this brochure can be compared across all categories as they are derived from reports of actual on-road crashes and represent the ability of the car to protect its driver.</p> <p>The 'Safe Pick' vehicles further identify vehicles that provide the best protection for both their own occupants and other road users in a crash.</p> <p>Any vehicle safety rating system can only provide an indication of the relative levels of protection between vehicles you can expect in the event of a crash. Whether or not you die or are seriously injured in a crash also depends on how safely you drive your vehicle.</p> | <p>An increasing number of vehicles are being equipped with safety features that help drivers avoid a crash and these should be considered when purchasing a used car. Some of these features are:</p> <ul style="list-style-type: none"><li>• Electronic Stability Control (ESC)</li><li>• Anti-lock Brake System (ABS)</li><li>• Traction Control</li><li>• Brake Assist</li></ul> <p>In deciding between different vehicles, or different models of the same vehicle, always chose the one with more of these features.</p> <p><b>DECADE OF ACTION ON ROAD SAFETY</b></p> <p>Most of us know someone who has been affected by a road crash, either by being injured themselves, or through suffering a bereavement or injury to a family member or friend.</p> <p>Every day, around the world, 3,500 people leave home and never return because they have been suddenly, violently, killed in a road crash.</p> <p>The United Nations General Assembly has set the goal for the decade: "to stabilise and then reduce the forecast level of road traffic fatalities around the world" by 2020. Millions of deaths could potentially be prevented as a result. The United Nations' Decade of Action for Road Safety 2011-2020 is our opportunity to make our communities and streets safer wherever we live.</p> <p>You can support this campaign by selecting a safer used vehicle by following the recommendations in this brochure.</p> |
